

Measuring for healthier minds

Preventing disaster

Each year, some 4 % of Finnish employees burnout, resulting in an average of 63 days on sick leave. Burnout generally has several causes: work stress and management, trouble off work, and personal relations between colleagues.

Most employees offer a variety of mental health services, employees are directed to them only once already on sick leave. When action is delayed, the employer is forced to adapt, and total expenses rise to tens of thousands of euros.

Pre-emptive measurement allows the employee and the employer to solve the problem before

At Havain, we believe in prevention.

15 € / mo

- Automatic detection of burnout and cognitive fatigue.
- Real-time data on employee well-being for HR and management.
- Seamless integration to existing healthcare services.

Havain currently offers open pilot memberships to companies operating in Finland.

We ask pilot customers to join three monthly check-ins where we gather feedback and tailor the product for your needs.

Recognise burnout before it happens

An organisation that knows its employees is healthy, happy, and productive. Currently, organisation only see health problems after the employee is already sick or has left their job.

Mental health platform

Havain is automatic

The user spend 0–5 seconds a day on Havain. Work fragmentation and mental fatigue are measured automatically with no input from the employee.

Smart Reports keep the user updated on their mental health. If necessary, Havain directs them to mental health resources offered by the employer.

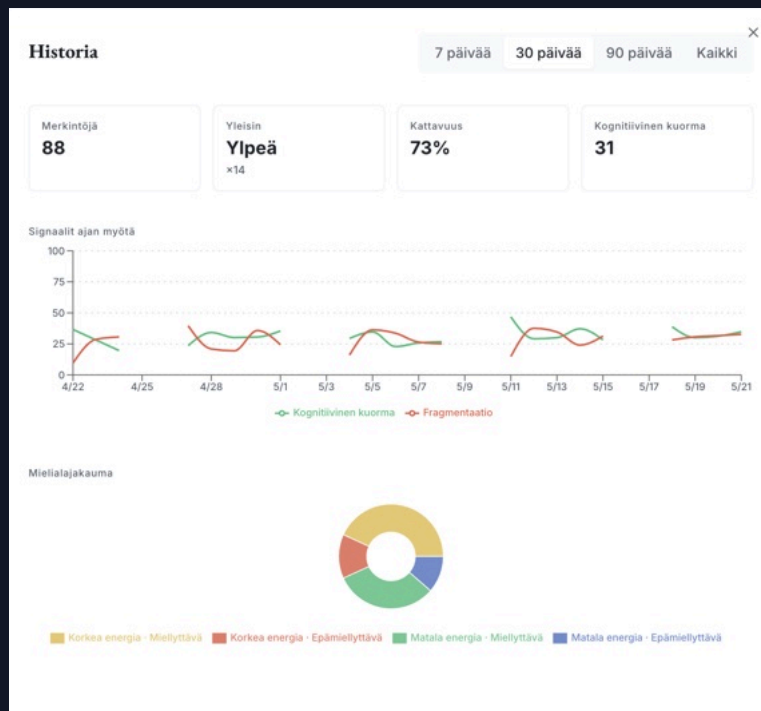

Workflow Designer allows them to better organise their day.

Our one-item **Daily Check-in** is a daily measure of general health.

Our **Work Fragmentation Algorithm** detects unhealthy task switching.

Our **Mental Fatigue Algorithm** detects early signs of cognitive deterioration.

The employee gets instant feedback for better work. The employer gets high-frequency, realtime data on employee health.

Our technology

Havain is built for plug and play.

The employee application is immediately ready to use with a comprehensive tutorial.

The HR portal is accessible at portal.havain.app. Registering a new organisation takes only a minute.

For privacy or security inquiries, please contact Luka Ainiäs at luka.ainias@aalto.fi.

Havain is secure.

Havain is built on a modern, EU-hosted technology stack with a layered, defence-in-depth security architecture. Customer data is stored and processed within the European Union on audited infrastructure providers.

Authentication and operational data are managed via Supabase, with strict multi-tenant isolation enforced at the database level using Row Level Security (RLS).

The web application is delivered via Cloudflare's global edge network, which provides TLS encryption, DDoS protection, and web application firewall (WAF) controls.

Employee data is stored securely on a dedicated backend running on isolated infrastructure (Hetzner), with explicit machine authentication, scoped API keys, and private networking. Sensitive credentials are managed server-side with strict access controls and least-privilege principles.

All sensitive credentials are stored server-side and protected using least-privilege access controls. Data in transit is encrypted using TLS.
